Amazon Managed Streaming for Apache Kafka API Reference 2.0

Welcome to API Reference 2.0. This API reference describes three new Amazon MSK operations: `CreateClusterV2`, `ListClustersV2`, and `DescribeClusterV2`. We recommend that you use these operations instead of the `CreateCluster`, `ListClusters`, and `DescribeCluster` that are described in [Amazon MSK API Reference 1.0](#).

Operations

The Amazon Managed Streaming for Apache Kafka REST API includes the following operations.

- [CreateClusterV2](#)

Creates a serverless or provisioned cluster.

- [DescribeClusterOperationV2](#)

- [DescribeClusterV2](#)

Returns information about a cluster.

- [ListClusterOperationsV2](#)

- [ListClustersV2](#)

Lists all serverless and provisioned clusters.

Resources

The Amazon Managed Streaming for Apache Kafka REST API includes the following resources.

Topics

- [Cluster](#)
- [Clusters](#)
- [V2 Clusters clusterArn Operations](#)
- [V2 Operations clusterOperationArn](#)

Cluster

Represents an Amazon MSK cluster.

URI

/api/v2/clusters/*clusterArn*

HTTP methods

GET

Operation ID: DescribeClusterV2

Returns information about a cluster.

Path parameters

Name	Type	Required	Description
<i>clusterArn</i>	String	True	ARN of the cluster to be described.

Responses

Status code	Response model	Description
200	DescribeClusterV2Response	HTTP Status Code 200: OK.
400	None	HTTP Status Code 400: Bad request due to incorrect input. Correct your request and then retry it.
401	None	HTTP Status Code 401: Unauthorized request. The provided credentials couldn't be validated.
403	None	HTTP Status Code 403: Access forbidden. Correct your credentials and then retry your request.
404	None	HTTP Status Code 404: Resource not found due to incorrect input. Correct your request and then retry it.
429	None	HTTP Status Code 429: Limit exceeded. Resource limit reached.
500	None	HTTP Status Code 500: Unexpected internal server error. Retrying your request might resolve the issue.
503	None	HTTP Status Code 503: Service Unavailable. Retrying

Status code	Response model	Description
		your request in some time might resolve the issue.

OPTIONS

Enable CORS by returning correct headers

Path parameters

Name	Type	Required	Description
<i>clusterArn</i>	String	True	ARN of the cluster to be described.

Responses

Status code	Response model	Description
200	None	200 response

Properties

BrokerAZDistribution

The distribution of broker nodes across Availability Zones.

DEFAULT

BrokerLogs

Broker Logs details for cluster.

s3

S3 Log destination details.

Type: [S3](#)

Required: False

firehose

Type: [Firehose](#)

Required: False

cloudWatchLogs

CloudWatch Log destination details.

Type: [CloudWatchLogs](#)

Required: False

BrokerNodeGroupInfo

Describes the setup to be used for the brokers.

clientSubnets

The list of subnets in the client VPC to connect to.

Type: Array of type string

Required: True

zonelds

The zonelds for brokers in customer account.

Type: Array of type string

Required: False

instanceType

The type of broker used for the cluster.

Type: string

Required: True

MinLength: 5

MaxLength: 32

connectivityInfo

Information about the cluster access configuration.

Type: [ConnectivityInfo](#)

Required: False

securityGroups

The security groups to attach to the ENIs for the broker nodes.

Type: Array of type string

Required: False

brokerAZDistribution

The distribution of broker nodes across Availability Zones.

Type: [BrokerAZDistribution](#)

Required: False

storageInfo

Data volume information.

Type: [StorageInfo](#)

Required: False

BrokerSoftwareInfo

Information about current software installed in the cluster.

configurationRevision

Revision of the configuration to use.

Type: integer

Required: False

Format: int64

kafkaVersion

The version of Apache Kafka to install and run on the cluster.

Type: string

Required: False

configurationArn

ARN of the configuration used on the cluster.

Type: string

Required: False

ClientAuthentication

Includes all client authentication information.

sasl

Details for ClientAuthentication using SASL.

Type: [Sasl](#)

Required: False

unauthenticated

Details for ClientAuthentication using no authentication.

Type: [Unauthenticated](#)

Required: False

tls

Details for ClientAuthentication using TLS.

Type: [Tls](#)

Required: False

ClientBroker

Client-broker encryption in transit setting.

TLS

TLS_PLAINTEXT

PLAINTEXT

CloudWatchLogs

CloudWatchLogs details for BrokerLogs.

logGroup

CloudWatch LogGroup where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination CW enabled or not.

Type: boolean

Required: True

Cluster

Returns information about a cluster.

clusterType

Type of the backend cluster.

Type: [ClusterType](#)

Required: False

clusterArn

The Amazon Resource Name (ARN) of the cluster.

Type: string

Required: False

activeOperationArn

Arn of active cluster operation.

Type: string

Required: False

provisioned

Properties of a provisioned cluster.

Type: [Provisioned](#)

Required: False

creationTime

The time when the cluster was created.

Type: string

Required: False

clusterName

The name of the cluster.

Type: string

Required: False

serverless

Properties of a serverless cluster.

Type: [Serverless](#)

Required: False

stateInfo

Includes information of the cluster state.

Type: [StateInfo](#)

Required: False

state

State of the cluster.

Type: [ClusterState](#)

Required: False

currentVersion

Current version of cluster.

Type: string

Required: False

tags

Tags attached to the cluster.

Type: object

Required: False

ClusterState

The state of an MSK cluster.

ACTIVE

CREATING

UPDATING

DELETING

FAILED

MAINTENANCE

REBOOTING_BROKER

HEALING

ClusterType

The type of backend cluster.

PROVISIONED

SERVERLESS

ConnectivityInfo

Broker access controls

vpcConnectivity

VPC connection control settings for brokers.

Type: [VpcConnectivity](#)

Required: False

publicAccess

Access control settings for brokers

Type: [PublicAccess](#)

Required: False

CustomerActionStatus

A type of an action required from the customer.

CRITICAL_ACTION_REQUIRED

ACTION_RECOMMENDED

NONE

DescribeClusterV2Response

Returns information about a cluster.

clusterInfo

Cluster information

Type: [Cluster](#)

Required: False

EBSStorageInfo

Contains information about the EBS storage volumes that are attached to the brokers.

provisionedThroughput

EBS volume provisioned throughput information.

Type: [ProvisionedThroughput](#)

Required: False

volumeSize

The size of the EBS volumes for the data drive on each of the brokers in GiB.

Type: integer

Required: False

Minimum: 1

Maximum: 16384

EncryptionAtRest

Details for encryption at rest.

dataVolumeKMSKeyId

KMS key used for data volume encryption.

Type: string

Required: True

EncryptionInTransit

Details for encryption in transit.

inCluster

In-cluster encryption in transit setting.

Type: boolean

Required: False

clientBroker

Client-broker encryption in transit setting.

Type: [ClientBroker](#)

Required: False

EncryptionInfo

Includes all encryption related information.

encryptionInTransit

Details for encryption in transit.

Type: [EncryptionInTransit](#)

Required: False

encryptionAtRest

Details for encryption at rest.

Type: [EncryptionAtRest](#)

Required: False

EnhancedMonitoring

Controls level of cluster metrics Amazon pushes to customer's cloudwatch account.

DEFAULT

PER_BROKER

PER_TOPIC_PER_BROKER

PER_TOPIC_PER_PARTITION

Firehose

Firehose details for BrokerLogs.

deliveryStream

Firehose delivery stream where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination firehose enabled or not.

Type: boolean

Required: True

IAM

Details for SASL/IAM client authentication.

enabled

SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

JmxExporter

JMX Exporter details.

enabledInBroker

JMX Exporter being enabled in broker.

Type: boolean

Required: True

LoggingInfo

Logging info details for the cluster.

brokerLogs

Broker Logs details.

Type: [BrokerLogs](#)

Required: True

NodeExporter

Node Exporter details.

enabledInBroker

Node Exporter being enabled in broker.

Type: boolean

Required: True

OpenMonitoring

JMX and Node monitoring for cluster.

prometheus

Prometheus details.

Type: [Prometheus](#)

Required: True

Prometheus

Prometheus details.

nodeExporter

Node Exporter details.

Type: [NodeExporter](#)

Required: False

jmxExporter

JMX Exporter details.

Type: [JmxExporter](#)

Required: False

Provisioned

Properties of a provisioned cluster.

encryptionInfo

Includes all encryption related information.

Type: [EncryptionInfo](#)

Required: False

zookeeperConnectionString

The connection string to use to connect to zookeeper cluster on plaintext port.

Type: string

Required: False

customerActionStatus

Determines if there is an action required from the customer.

Type: [CustomerActionStatus](#)

Required: False

zookeeperConnectionStringTls

The connection string to use to connect to zookeeper cluster on Tls port.

Type: string

Required: False

loggingInfo

Logging Info details.

Type: [LoggingInfo](#)

Required: False

numberOfBrokerNodes

The number of brokers to create in the cluster.

Type: integer

Required: False

enhancedMonitoring

This knob controls level of metrics pushed customer's cloudwatch account.

Type: [EnhancedMonitoring](#)

Required: False

storageMode

This controls storage mode for supported storage tiers.

Type: [StorageMode](#)

Required: False

clientAuthentication

Includes all client authentication information.

Type: [ClientAuthentication](#)

Required: False

brokerNodeGroupInfo

Information about the brokers of the cluster.

Type: [BrokerNodeGroupInfo](#)

Required: False

openMonitoring

Open monitoring details.

Type: [OpenMonitoring](#)

Required: False

rebalancing

Contains information about intelligent rebalancing for the cluster.

Type: [Rebalancing](#)

Required: False

currentBrokerSoftwareInfo

Information about the version of the software that is deployed on the brokers of the cluster.

Type: [BrokerSoftwareInfo](#)

Required: False

ProvisionedThroughput

Contains information about provisioned throughput for the EBS storage volumes that are attached to the brokers.

volumeThroughput

Throughput value of the EBS volumes for the data drive on each broker in MiB per second.

Type: integer

Required: False

enabled

Whether provisioned throughput is turned on.

Type: boolean

Required: False

PublicAccess

Broker access controls

type

If public access is disabled, or if enabled the EIP provider

Type: string

Required: False

Rebalancing

Contains information about intelligent rebalancing for the cluster. Intelligent rebalancing performs automatic partition balancing operations when you scale your clusters up or down.

status

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

Type: [RebalancingStatus](#)

Required: True

RebalancingStatus

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

PAUSED

ACTIVE

S3

S3 details for BrokerLogs.

bucket

Name of the bucket where the logs will be delivered.

Type: string

Required: False

prefix

prefix to the S3 bucket where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination S3 enabled or not.

Type: boolean

Required: True

Sasl

Details for client authentication using SASL.

iam

Details for ClientAuthentication using IAM.

Type: [IAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication.

Type: [Scram](#)

Required: False

Scram

Details for SASL/SCRAM client authentication.

enabled

SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

Serverless

Properties to create a serverless cluster

vpcConfigs

VPC configuration information

Type: Array of type [VpcConfig](#)

Required: True

kafkaVersion

The version of Apache Kafka for the serverless cluster.

Type: string

Required: False

clientAuthentication

Includes all client authentication related information.

Type: [ServerlessClientAuthentication](#)

Required: True

ServerlessClientAuthentication

Details for client authentication using SASL.

sasl

Details for ClientAuthentication using IAM.

Type: [ServerlessSasl](#)

Required: False

ServerlessSasl

Details for client authentication using SASL for Serverless Cluster.

iam

Details for ClientAuthentication using IAM for Serverless Cluster.

Type: [IAM](#)

Required: False

StateInfo

Includes information about the cluster state.

code

Code for cluster state.

Type: string

Required: False

message

Message for cluster state.

Type: string

Required: False

StorageInfo

Contains information about the storage volumes that are attached to the brokers.

ebsStorageInfo

EBS volume information.

Type: [EBSStorageInfo](#)

Required: False

StorageMode

Controls storage mode for various supported storage tiers.

LOCAL

TIERED

Tls

The details of client authentication using TLS.

certificateAuthorityArnList

List of ACM CertificateAuthority ARNs.

Type: Array of type string

Required: False

enabled

Whether TLS authentication is turned on.

Type: boolean

Required: False

Unauthenticated

Details for allowing no client authentication.

enabled

Unauthenticated is enabled or not.

Type: boolean

Required: False

VpcConfig

Includes information about subnets and security groups for a VPC.

securityGroupIds

The security groups to attach to the ENIs for the broker nodes.

Type: Array of type string

Required: False

subnetIds

The list of subnets in the client VPC to connect to. Client subnets can't occupy the Availability Zone with ID use1-az3.

Type: Array of type string

Required: True

VpcConnectivity

VPC connection control settings for brokers.

clientAuthentication

VPC connection control settings for brokers.

Type: [VpcConnectivityClientAuthentication](#)

Required: False

VpcConnectivityClientAuthentication

Includes all client authentication information for VpcConnectivity.

sasl

Details for VpcConnectivity ClientAuthentication using SASL.

Type: [VpcConnectivitySasl](#)

Required: False

tls

Details for VpcConnectivity ClientAuthentication using TLS.

Type: [VpcConnectivityTls](#)

Required: False

VpcConnectivityIAM

Details for SASL/IAM client authentication for VpcConnectivity.

enabled

Specifies whether SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivitySasl

Details for client authentication using SASL for VpcConnectivity.

iam

Details for ClientAuthentication using IAM for VpcConnectivity.

Type: [VpcConnectivityIAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication for VpcConnectivity.

Type: [VpcConnectivityScram](#)

Required: False

VpcConnectivityScram

Details for SASL/SCRAM client authentication for vpcConnectivity.

enabled

Specifies whether SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivityTls

Details for client authentication using TLS for vpcConnectivity.

enabled

Specifies whether TLS authentication is enabled or not.

Type: boolean

Required: False

Clusters

Represents the Amazon MSK clusters in an account.

URI

/api/v2/clusters

HTTP methods

GET

Operation ID: ListClustersV2

Lists all serverless and provisioned clusters.

Query parameters

Name	Type	Required	Description
nextToken	String	False	If the response of ListClusters is truncated, it returns a nextToken in the response. This nextToken should be sent in the subsequent request to ListClusters.
clusterNameFilter	String	False	Returns clusters starting with given name.
maxResults	String	False	Maximum number of clusters to fetch in one get request.

Name	Type	Required	Description
clusterTypeFilter	String	False	Returns clusters with the given type.

Responses

Status code	Response model	Description
200	ListClustersV2Response	HTTP Status Code 200: OK.
400	None	HTTP Status Code 400: Bad request due to incorrect input. Correct your request and then retry it.
401	None	HTTP Status Code 401: Unauthorized request. The provided credentials couldn't be validated.
403	None	HTTP Status Code 403: Access forbidden. Correct your credentials and then retry your request.
404	None	HTTP Status Code 404: Resource not found due to incorrect input. Correct your request and then retry it.
429	None	HTTP Status Code 429: Limit exceeded. Resource limit reached.
500	None	HTTP Status Code 500: Unexpected internal server

Status code	Response model	Description
503	None	error. Retrying your request might resolve the issue. HTTP Status Code 503: Service Unavailable. Retrying your request in some time might resolve the issue.

POST

Operation ID: CreateClusterV2

Creates a serverless or provisioned cluster.

Responses

Status code	Response model	Description
200	CreateClusterV2Response	HTTP Status Code 200: OK.
400	None	HTTP Status Code 400: Bad request due to incorrect input. Correct your request and then retry it.
401	None	HTTP Status Code 401: Unauthorized request. The provided credentials couldn't be validated.
403	None	HTTP Status Code 403: Access forbidden. Correct your credentials and then retry your request.
404	None	HTTP Status Code 404: Resource not found due to

Status code	Response model	Description
		incorrect input. Correct your request and then retry it.
409	None	HTTP Status Code 409: Conflict. This cluster name already exists. Retry your request with another name.
429	None	HTTP Status Code 429: Limit exceeded. Resource limit reached.
500	None	HTTP Status Code 500: Unexpected internal server error. Retrying your request might resolve the issue.
503	None	HTTP Status Code 503: Service Unavailable. Retrying your request in some time might resolve the issue.

OPTIONS

Enable CORS by returning correct headers

Responses

Status code	Response model	Description
200	None	200 response

Properties

BrokerAZDistribution

The distribution of broker nodes across Availability Zones.

DEFAULT

BrokerLogs

Broker Logs details for cluster.

s3

S3 Log destination details.

Type: [S3](#)

Required: False

firehose

Type: [Firehose](#)

Required: False

cloudWatchLogs

CloudWatch Log destination details.

Type: [CloudWatchLogs](#)

Required: False

BrokerNodeGroupInfo

Describes the setup to be used for the brokers.

clientSubnets

The list of subnets in the client VPC to connect to.

Type: Array of type string

Required: True

zonelds

The zonelds for brokers in customer account.

Type: Array of type string

Required: False

instanceType

The type of broker used for the cluster.

Type: string

Required: True

MinLength: 5

MaxLength: 32

connectivityInfo

Information about the cluster access configuration.

Type: [ConnectivityInfo](#)

Required: False

securityGroups

The security groups to attach to the ENIs for the broker nodes.

Type: Array of type string

Required: False

brokerAZDistribution

The distribution of broker nodes across Availability Zones.

Type: [BrokerAZDistribution](#)

Required: False

storageInfo

Data volume information.

Type: [StorageInfo](#)

Required: False

BrokerSoftwareInfo

Information about current software installed in the cluster.

configurationRevision

Revision of the configuration to use.

Type: integer

Required: False

Format: int64

kafkaVersion

The version of Apache Kafka to install and run on the cluster.

Type: string

Required: False

configurationArn

ARN of the configuration used on the cluster.

Type: string

Required: False

ClientAuthentication

Includes all client authentication information.

sasl

Details for ClientAuthentication using SASL.

Type: [Sasl](#)

Required: False

unauthenticated

Details for ClientAuthentication using no authentication.

Type: [Unauthenticated](#)

Required: False

tls

Details for ClientAuthentication using TLS.

Type: [Tls](#)

Required: False

ClientBroker

Client-broker encryption in transit setting.

TLS

TLS_PLAINTEXT

PLAINTEXT

CloudWatchLogs

CloudWatchLogs details for BrokerLogs.

logGroup

CloudWatch LogGroup where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination CW enabled or not.

Type: boolean

Required: True

Cluster

Returns information about a cluster.

clusterType

Type of the backend cluster.

Type: [ClusterType](#)

Required: False

clusterArn

The Amazon Resource Name (ARN) of the cluster.

Type: string

Required: False

activeOperationArn

Arn of active cluster operation.

Type: string

Required: False

provisioned

Properties of a provisioned cluster.

Type: [Provisioned](#)

Required: False

creationTime

The time when the cluster was created.

Type: string

Required: False

clusterName

The name of the cluster.

Type: string

Required: False

serverless

Properties of a serverless cluster.

Type: [Serverless](#)

Required: False

stateInfo

Includes information of the cluster state.

Type: [StateInfo](#)

Required: False

state

State of the cluster.

Type: [ClusterState](#)

Required: False

currentVersion

Current version of cluster.

Type: string

Required: False

tags

Tags attached to the cluster.

Type: object

Required: False

ClusterState

The state of an MSK cluster.

ACTIVE

CREATING

UPDATING

DELETING

FAILED

MAINTENANCE

REBOOTING_BROKER

HEALING

ClusterType

The type of backend cluster.

PROVISIONED

SERVERLESS

ConfigurationInfo

Specifies the configuration to be used on the brokers.

arn

ARN of the configuration to use.

Type: string

Required: True

revision

The revision of the configuration to use.

Type: integer

Required: True

Format: int64

Minimum: 1

ConnectivityInfo

Broker access controls

vpcConnectivity

VPC connection control settings for brokers.

Type: [VpcConnectivity](#)

Required: False

publicAccess

Access control settings for brokers

Type: [PublicAccess](#)

Required: False

CreateClusterV2Request

Creates a provisioned or serverless cluster.

provisioned

Properties required for creating a provisioned cluster.

Type: [ProvisionedRequest](#)

Required: False

clusterName

The name of the cluster.

Type: string

Required: True

MinLength: 1

MaxLength: 64

serverless

Properties required for creating a serverless cluster.

Type: [ServerlessRequest](#)

Required: False

tags

Create tags when creating the cluster.

Type: object

Required: False

CreateClusterV2Response

Returns information about the created cluster.

clusterType

Type of the backend cluster.

Type: [ClusterType](#)

Required: False

clusterArn

The Amazon Resource Name (ARN) of the cluster.

Type: string

Required: False

clusterName

Name of the cluster provided by the customer.

Type: string

Required: False

state

State of the cluster.

Type: [ClusterState](#)

Required: False

CustomerActionStatus

A type of an action required from the customer.

CRITICAL_ACTION_REQUIRED

ACTION_RECOMMENDED

NONE

EBSStorageInfo

Contains information about the EBS storage volumes that are attached to the brokers.

provisionedThroughput

EBS volume provisioned throughput information.

Type: [ProvisionedThroughput](#)

Required: False

volumeSize

The size of the EBS volumes for the data drive on each of the brokers in GiB.

Type: integer

Required: False

Minimum: 1

Maximum: 16384

EncryptionAtRest

Details for encryption at rest.

dataVolumeKMSKeyId

KMS key used for data volume encryption.

Type: string

Required: True

EncryptionInTransit

Details for encryption in transit.

inCluster

In-cluster encryption in transit setting.

Type: boolean

Required: False

clientBroker

Client-broker encryption in transit setting.

Type: [ClientBroker](#)

Required: False

EncryptionInfo

Includes all encryption related information.

encryptionInTransit

Details for encryption in transit.

Type: [EncryptionInTransit](#)

Required: False

encryptionAtRest

Details for encryption at rest.

Type: [EncryptionAtRest](#)

Required: False

EnhancedMonitoring

Controls level of cluster metrics Amazon pushes to customer's cloudwatch account.

DEFAULT

PER_BROKER

PER_TOPIC_PER_BROKER

PER_TOPIC_PER_PARTITION

Firehose

Firehose details for BrokerLogs.

deliveryStream

Firehose delivery stream where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination firehose enabled or not.

Type: boolean

Required: True

IAM

Details for SASL/IAM client authentication.

enabled

SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

JmxExporter

JMX Exporter details.

enabledInBroker

JMX Exporter being enabled in broker.

Type: boolean

Required: True

JmxExporterInfo

JMX Exporter details.

enabledInBroker

JMX Exporter being enabled in broker.

Type: boolean

Required: True

ListClustersV2Response

The response contains an array of cluster information and a nextToken if the response is truncated.

nextToken

If the response of ListClustersV2 is truncated, it returns a NextToken in the response. Pass this NextToken in a subsequent request to ListClustersV2 to get the next set of results.

Type: string

Required: False

clusterInfoList

An array of clusters.

Type: Array of type [Cluster](#)

Required: False

LoggingInfo

Logging info details for the cluster.

brokerLogs

Broker Logs details.

Type: [BrokerLogs](#)

Required: True

NodeExporter

Node Exporter details.

enabledInBroker

Node Exporter being enabled in broker.

Type: boolean

Required: True

NodeExporterInfo

Node Exporter details.

enabledInBroker

Node Exporter being enabled in broker.

Type: boolean

Required: True

OpenMonitoring

JMX and Node monitoring for cluster.

prometheus

Prometheus details.

Type: [Prometheus](#)

Required: True

OpenMonitoringInfo

JMX and Node monitoring for the cluster.

prometheus

Prometheus details.

Type: [PrometheusInfo](#)

Required: True

Prometheus

Prometheus details.

nodeExporter

Node Exporter details.

Type: [NodeExporter](#)

Required: False

jmxExporter

JMX Exporter details.

Type: [JmxExporter](#)

Required: False

PrometheusInfo

Prometheus details.

nodeExporter

Node Exporter details.

Type: [NodeExporterInfo](#)

Required: False

jmxExporter

JMX Exporter details.

Type: [JmxExporterInfo](#)

Required: False

Provisioned

Properties of a provisioned cluster.

encryptionInfo

Includes all encryption related information.

Type: [EncryptionInfo](#)

Required: False

zookeeperConnectionString

The connection string to use to connect to zookeeper cluster on plaintext port.

Type: string

Required: False

customerActionStatus

Determines if there is an action required from the customer.

Type: [CustomerActionStatus](#)

Required: False

zookeeperConnectionStringTls

The connection string to use to connect to zookeeper cluster on Tls port.

Type: string

Required: False

loggingInfo

Logging Info details.

Type: [LoggingInfo](#)

Required: False

numberOfBrokerNodes

The number of brokers to create in the cluster.

Type: integer

Required: False

enhancedMonitoring

This knob controls level of metrics pushed customer's cloudwatch account.

Type: [EnhancedMonitoring](#)

Required: False

storageMode

This controls storage mode for supported storage tiers.

Type: [StorageMode](#)

Required: False

clientAuthentication

Includes all client authentication information.

Type: [ClientAuthentication](#)

Required: False

brokerNodeGroupInfo

Information about the brokers of the cluster.

Type: [BrokerNodeGroupInfo](#)

Required: False

openMonitoring

Open monitoring details.

Type: [OpenMonitoring](#)

Required: False

rebalancing

Contains information about intelligent rebalancing for the cluster.

Type: [Rebalancing](#)

Required: False

currentBrokerSoftwareInfo

Information about the version of the software that is deployed on the brokers of the cluster.

Type: [BrokerSoftwareInfo](#)

Required: False

ProvisionedRequest

Properties for creating a provisioned cluster.

encryptionInfo

Includes all encryption related information.

Type: [EncryptionInfo](#)

Required: False

numberOfBrokerNodes

The number of brokers to create in the cluster.

Type: integer

Required: False

configurationInfo

The configuration to be used on the brokers.

Type: [ConfigurationInfo](#)

Required: False

enhancedMonitoring

Specifies the monitoring level for the cluster.

Type: [EnhancedMonitoring](#)

Required: False

storageMode

Specifies the storage mode for supported storage tiers.

Type: [StorageMode](#)

Required: False

kafkaVersion

The version of Apache Kafka to install and run on the cluster.

Type: string

Required: False

MinLength: 1

MaxLength: 128

clientAuthentication

Includes all client authentication related information.

Type: [ClientAuthentication](#)

Required: False

loggingInfo

Logging Info details.

Type: [LoggingInfo](#)

Required: False

brokerNodeGroupInfo

Information about the brokers of the cluster.

Type: [BrokerNodeGroupInfo](#)

Required: False

openMonitoring

The open-monitoring details.

Type: [OpenMonitoringInfo](#)

Required: False

rebalancing

Specifies if intelligent rebalancing should be turned on for the new cluster. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters that you create with Express brokers.

Type: [Rebalancing](#)

Required: False

ProvisionedThroughput

Contains information about provisioned throughput for the EBS storage volumes that are attached to the brokers.

volumeThroughput

Throughput value of the EBS volumes for the data drive on each broker in MiB per second.

Type: integer

Required: False

enabled

Whether provisioned throughput is turned on.

Type: boolean

Required: False

PublicAccess

Broker access controls

type

If public access is disabled, or if enabled the EIP provider

Type: string

Required: False

Rebalancing

Contains information about intelligent rebalancing for the cluster. Intelligent rebalancing performs automatic partition balancing operations when you scale your clusters up or down.

status

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

Type: [RebalancingStatus](#)

Required: True

RebalancingStatus

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

PAUSED

ACTIVE

S3

S3 details for BrokerLogs.

bucket

Name of the bucket where the logs will be delivered.

Type: string

Required: False

prefix

prefix to the S3 bucket where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination S3 enabled or not.

Type: boolean

Required: True

Sasl

Details for client authentication using SASL.

iam

Details for ClientAuthentication using IAM.

Type: [IAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication.

Type: [Scram](#)

Required: False

Scram

Details for SASL/SCRAM client authentication.

enabled

SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

Serverless

Properties to create a serverless cluster

vpcConfigs

VPC configuration information

Type: Array of type [VpcConfig](#)

Required: True

kafkaVersion

The version of Apache Kafka for the serverless cluster.

Type: string

Required: False

clientAuthentication

Includes all client authentication related information.

Type: [ServerlessClientAuthentication](#)

Required: True

ServerlessClientAuthentication

Details for client authentication using SASL.

sasl

Details for ClientAuthentication using IAM.

Type: [ServerlessSasl](#)

Required: False

ServerlessRequest

Properties for creating a serverless cluster.

vpcConfigs

VPC configuration information

Type: Array of type [VpcConfig](#)

Required: True

clientAuthentication

Includes all client authentication related information.

Type: [ServerlessClientAuthentication](#)

Required: True

ServerlessSasl

Details for client authentication using SASL for Serverless Cluster.

iam

Details for ClientAuthentication using IAM for Serverless Cluster.

Type: [IAM](#)

Required: False

StateInfo

Includes information about the cluster state.

code

Code for cluster state.

Type: string

Required: False

message

Message for cluster state.

Type: string

Required: False

StorageInfo

Contains information about the storage volumes that are attached to the brokers.

ebsStorageInfo

EBS volume information.

Type: [EBSStorageInfo](#)

Required: False

StorageMode

Controls storage mode for various supported storage tiers.

LOCAL

TIERED

Tls

The details of client authentication using TLS.

certificateAuthorityArnList

List of ACM CertificateAuthority ARNs.

Type: Array of type string

Required: False

enabled

Whether TLS authentication is turned on.

Type: boolean

Required: False

Unauthenticated

Details for allowing no client authentication.

enabled

Unauthenticated is enabled or not.

Type: boolean

Required: False

VpcConfig

Includes information about subnets and security groups for a VPC.

securityGroupIds

The security groups to attach to the ENIs for the broker nodes.

Type: Array of type string

Required: False

subnetIds

The list of subnets in the client VPC to connect to. Client subnets can't occupy the Availability Zone with ID use1-az3.

Type: Array of type string

Required: True

VpcConnectivity

VPC connection control settings for brokers.

clientAuthentication

VPC connection control settings for brokers.

Type: [VpcConnectivityClientAuthentication](#)

Required: False

VpcConnectivityClientAuthentication

Includes all client authentication information for VpcConnectivity.

sasl

Details for VpcConnectivity ClientAuthentication using SASL.

Type: [VpcConnectivitySasl](#)

Required: False

tls

Details for VpcConnectivity ClientAuthentication using TLS.

Type: [VpcConnectivityTls](#)

Required: False

VpcConnectivityIAM

Details for SASL/IAM client authentication for VpcConnectivity.

enabled

Specifies whether SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivitySasl

Details for client authentication using SASL for VpcConnectivity.

iam

Details for ClientAuthentication using IAM for VpcConnectivity.

Type: [VpcConnectivityIAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication for VpcConnectivity.

Type: [VpcConnectivityScram](#)

Required: False

VpcConnectivityScram

Details for SASL/SCRAM client authentication for vpcConnectivity.

enabled

Specifies whether SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivityTls

Details for client authentication using TLS for vpcConnectivity.

enabled

Specifies whether TLS authentication is enabled or not.

Type: boolean

Required: False

V2 Clusters clusterArn Operations

URI

/api/v2/clusters/*clusterArn*/operations

HTTP methods

GET

Operation ID: ListClusterOperationsV2

Returns a list of all the operations that have been performed on the specified MSK cluster.

Path parameters

Name	Type	Required	Description
<i>clusterArn</i>	String	True	ARN of the cluster to be described.

Query parameters

Name	Type	Required	Description
nextToken	String	False	If the response of ListClusters is truncated, it returns a nextToken in the response. This nextToken should be sent in the subsequent request to ListClusters.
maxResults	String	False	Maximum number of clusters to fetch in one get request.

Responses

Status code	Response model	Description
200	ListClusterOperationsV2Response	HTTP Status Code 200: OK.
400	None	HTTP Status Code 400: Bad request due to incorrect input. Correct your request and then retry it.
401	None	HTTP Status Code 401: Unauthorized request. The provided credentials couldn't be validated.
403	None	HTTP Status Code 403: Access forbidden. Correct your credentials and then retry your request.
404	None	HTTP Status Code 404: Resource not found due to incorrect input. Correct your request and then retry it.
429	None	HTTP Status Code 429: Limit exceeded. Resource limit reached.
500	None	HTTP Status Code 500: Unexpected internal server error. Retrying your request might resolve the issue.
503	None	HTTP Status Code 503: Service Unavailable. Retrying

Status code	Response model	Description
		your request in some time might resolve the issue.

OPTIONS

Enable CORS by returning correct headers

Path parameters

Name	Type	Required	Description
<i>clusterArn</i>	String	True	ARN of the cluster to be described.

Responses

Status code	Response model	Description
200	None	200 response

Schemas

Response bodies

ListClusterOperationsV2Response schema

```
{
  "nextToken": "string",
  "clusterOperationInfoList": [
    {
      "clusterType": enum,
      "clusterArn": "string",
      "operationState": "string",
      "startTime": "string",
      "operationType": "string",
      "endTime": "string",
    }
  ]
}
```

```
    "operationArn": "string"  
  }  
]  
}
```

Properties

ClusterOperationV2Summary

Returns information about a cluster operation.

clusterType

Type of the backend cluster.

Type: [ClusterType](#)

Required: False

clusterArn

ARN of the cluster.

Type: string

Required: False

operationState

State of the cluster operation.

Type: string

Required: False

startTime

The time at which operation was created.

Type: string

Required: False

operationType

Type of the cluster operation.

Type: string

Required: False

endTime

The time at which the operation finished.

Type: string

Required: False

operationArn

ARN of the cluster operation.

Type: string

Required: False

ClusterType

The type of backend cluster.

PROVISIONED

SERVERLESS

ListClusterOperationsV2Response

The response contains an array containing cluster operation information and a `nextToken` if the response is truncated. Displays operations of the type `DECREASE_BROKER_COUNT` in results list after a successful broker removal operation.

nextToken

If the response of `ListClusterOperationsV2` is truncated, it returns a `nextToken` in the response. This `nextToken` should be sent in the subsequent request to `ListClusterOperationsV2`.

Type: string

Required: False

clusterOperationInfoList

An array of cluster operation information objects.

Type: Array of type [ClusterOperationV2Summary](#)

Required: False

V2 Operations clusterOperationArn

URI

/api/v2/operations/*clusterOperationArn*

HTTP methods

GET

Operation ID: DescribeClusterOperationV2

Returns a description of the cluster operation specified by the ARN.

Path parameters

Name	Type	Required	Description
<i>clusterOperationArn</i>	String	True	ARN of the cluster operation to describe.

Responses

Status code	Response model	Description
200	DescribeClusterOperationV2Response	200 response
400	None	HTTP Status Code 400: Bad request due to incorrect input. Correct your request and then retry it.

Properties

BrokerCountUpdateInfo

Contains the list of broker ids being changed during a broker count update.

createdBrokerIds

List of Kafka Broker IDs being created.

Type: Array of type number

Required: False

deletedBrokerIds

List of Kafka Broker IDs being deleted.

Type: Array of type number

Required: False

BrokerEBSVolumeInfo

Specifies the EBS volume object per broker which captures broker identifier and corresponding target volume size. Broker identifier could be id or arn or the keyword 'ALL'. If it is 'ALL', all nodes of the cluster will be considered for the operation.

volumeSizeGB

Size of the EBS volume to update.

Type: integer

Required: False

provisionedThroughput

EBS volume provisioned throughput information.

Type: [ProvisionedThroughput](#)

Required: False

kafkaBrokerNodeId

Kafka id of the broker in the cluster to update.

Type: string

Required: True

BrokerLogs

Broker Logs details for cluster.

s3

S3 Log destination details.

Type: [S3](#)

Required: False

firehose

Type: [Firehose](#)

Required: False

cloudWatchLogs

CloudWatch Log destination details.

Type: [CloudWatchLogs](#)

Required: False

ClientAuthentication

Includes all client authentication information.

sasl

Details for ClientAuthentication using SASL.

Type: [Sasl](#)

Required: False

unauthenticated

Details for ClientAuthentication using no authentication.

Type: [Unauthenticated](#)

Required: False

tls

Details for ClientAuthentication using TLS.

Type: [Tls](#)

Required: False

ClientBroker

Client-broker encryption in transit setting.

TLS

TLS_PLAINTEXT

PLAINTEXT

CloudWatchLogs

CloudWatchLogs details for BrokerLogs.

logGroup

CloudWatch LogGroup where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination CW enabled or not.

Type: boolean

Required: True

ClusterOperationStep

Step taken during a cluster operation.

stepName

The name of the step.

Type: string

Required: False

stepInfo

Information about the step and its status.

Type: [ClusterOperationStepInfo](#)

Required: False

ClusterOperationStepInfo

State information about the operation step.

stepStatus

The steps current status.

Type: string

Required: False

ClusterOperationV2

Returns information about a cluster operation.

clusterType

Type of the backend cluster.

Type: [ClusterType](#)

Required: False

clusterArn

ARN of the cluster.

Type: string

Required: False

provisioned

Properties of a provisioned cluster.

Type: [ClusterOperationV2Provisioned](#)

Required: False

operationState

State of the cluster operation.

Type: string

Required: False

serverless

Properties of a serverless cluster.

Type: [ClusterOperationV2Serverless](#)

Required: False

errorInfo

If cluster operation failed from an error, it describes the error.

Type: [ErrorInfo](#)

Required: False

operationType

Type of the cluster operation.

Type: string

Required: False

startTime

The time at which operation was created.

Type: string

Required: False

endTime

The time at which the operation finished.

Type: string

Required: False

operationArn

ARN of the cluster operation.

Type: string

Required: False

ClusterOperationV2Provisioned

Returns information about a provisioned cluster operation.

sourceClusterInfo

Information about cluster attributes before a cluster is updated.

Type: [MutableClusterInfo](#)

Required: False

vpcConnectionInfo

Description of the VPC connection for CreateVpcConnection and DeleteVpcConnection operations.

Type: [VpcConnectionInfo](#)

Required: False

operationSteps

Steps completed during the operation.

Type: Array of type [ClusterOperationStep](#)

Required: False

targetClusterInfo

Information about cluster attributes after a cluster is updated.

Type: [MutableClusterInfo](#)

Required: False

ClusterOperationV2Serverless

Returns information about a serverless cluster operation.

vpcConnectionInfo

Description of the VPC connection for CreateVpcConnection and DeleteVpcConnection operations.

Type: [VpcConnectionInfoServerless](#)

Required: False

ClusterType

The type of backend cluster.

PROVISIONED

SERVERLESS

ConfigurationInfo

Specifies the configuration to be used on the brokers.

arn

ARN of the configuration to use.

Type: string

Required: True

revision

The revision of the configuration to use.

Type: integer

Required: True

Format: int64

Minimum: 1

ConnectivityInfo

Broker access controls

vpcConnectivity

VPC connection control settings for brokers.

Type: [VpcConnectivity](#)

Required: False

publicAccess

Access control settings for brokers

Type: [PublicAccess](#)

Required: False

DescribeClusterOperationV2Response

Information about a cluster operation.

clusterOperationInfo

Cluster operation information.

Type: [ClusterOperationV2](#)

Required: False

EncryptionAtRest

Details for encryption at rest.

dataVolumeKMSKeyId

KMS key used for data volume encryption.

Type: string

Required: True

EncryptionInTransit

Details for encryption in transit.

inCluster

In-cluster encryption in transit setting.

Type: boolean

Required: False

clientBroker

Client-broker encryption in transit setting.

Type: [ClientBroker](#)

Required: False

EncryptionInfo

Includes all encryption related information.

encryptionInTransit

Details for encryption in transit.

Type: [EncryptionInTransit](#)

Required: False

encryptionAtRest

Details for encryption at rest.

Type: [EncryptionAtRest](#)

Required: False

EnhancedMonitoring

Controls level of cluster metrics Amazon pushes to customer's cloudwatch account.

DEFAULT

PER_BROKER

PER_TOPIC_PER_BROKER

PER_TOPIC_PER_PARTITION

ErrorInfo

Error Information about a failed cluster operation.

errorString

error message.

Type: string

Required: False

errorCode

error code.

Type: string

Required: False

Firehose

Firehose details for BrokerLogs.

deliveryStream

Firehose delivery stream where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination firehose enabled or not.

Type: boolean

Required: True

IAM

Details for SASL/IAM client authentication.

enabled

SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

JmxExporter

JMX Exporter details.

enabledInBroker

JMX Exporter being enabled in broker.

Type: boolean

Required: True

LoggingInfo

Logging info details for the cluster.

brokerLogs

Broker Logs details.

Type: [BrokerLogs](#)

Required: True

MutableClusterInfo

Information about cluster attributes that can be updated using update APIs.

encryptionInfo

Encryption details.

Type: [EncryptionInfo](#)

Required: False

configurationInfo

Information about the Kafka configuration deployed on the brokers of the cluster.

Type: [ConfigurationInfo](#)

Required: False

brokerCountUpdateInfo

Describes brokers being changed during a broker count update.

Type: [BrokerCountUpdateInfo](#)

Required: False

instanceType

The instance type.

Type: string

Required: False

loggingInfo

LoggingInfo details.

Type: [LoggingInfo](#)

Required: False

brokerEBSVolumeInfo

Type: Array of type [BrokerEBSVolumeInfo](#)

Required: False

numberOfBrokerNodes

The number of Kafka broker nodes of the Cluster.

Type: integer

Required: False

enhancedMonitoring

This knob controls level of metrics pushed customer's CloudWatch account.

Type: [EnhancedMonitoring](#)

Required: False

storageMode

This controls storage mode for supported storage tiers.

Type: [StorageMode](#)

Required: False

kafkaVersion

The Kafka version.

Type: string

Required: False

connectivityInfo

Defines the connectivity configuration of the cluster.

Type: [ConnectivityInfo](#)

Required: False

clientAuthentication

Client Authentication details.

Type: [ClientAuthentication](#)

Required: False

openMonitoring

Open monitoring details.

Type: [OpenMonitoring](#)

Required: False

rebalancing

Specifies if intelligent rebalancing is turned on for your cluster. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters that you create with Express brokers.

Type: [Rebalancing](#)

Required: False

NodeExporter

Node Exporter details.

enabledInBroker

Node Exporter being enabled in broker.

Type: boolean

Required: True

OpenMonitoring

JMX and Node monitoring for cluster.

prometheus

Prometheus details.

Type: [Prometheus](#)

Required: True

Prometheus

Prometheus details.

nodeExporter

Node Exporter details.

Type: [NodeExporter](#)

Required: False

jmxExporter

JMX Exporter details.

Type: [JmxExporter](#)

Required: False

ProvisionedThroughput

Contains information about provisioned throughput for the EBS storage volumes that are attached to the brokers.

volumeThroughput

Throughput value of the EBS volumes for the data drive on each broker in MiB per second.

Type: integer

Required: False

enabled

Whether provisioned throughput is turned on.

Type: boolean

Required: False

PublicAccess

Broker access controls

type

If public access is disabled, or if enabled the EIP provider

Type: string

Required: False

Rebalancing

Contains information about intelligent rebalancing for the cluster. Intelligent rebalancing performs automatic partition balancing operations when you scale your clusters up or down.

status

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

Type: [RebalancingStatus](#)

Required: True

RebalancingStatus

Intelligent rebalancing status. The default intelligent rebalancing status is ACTIVE for all new MSK Provisioned clusters with Express brokers.

PAUSED

ACTIVE

S3

S3 details for BrokerLogs.

bucket

Name of the bucket where the logs will be delivered.

Type: string

Required: False

prefix

prefix to the S3 bucket where the logs will be delivered.

Type: string

Required: False

enabled

Broker logs for destination S3 enabled or not.

Type: boolean

Required: True

Sasl

Details for client authentication using SASL.

iam

Details for ClientAuthentication using IAM.

Type: [IAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication.

Type: [Scram](#)

Required: False

Scram

Details for SASL/SCRAM client authentication.

enabled

SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

StorageMode

Controls storage mode for various supported storage tiers.

LOCAL

TIERED

Tls

The details of client authentication using TLS.

certificateAuthorityArnList

List of ACM CertificateAuthority ARNs.

Type: Array of type string

Required: False

enabled

Whether TLS authentication is turned on.

Type: boolean

Required: False

Unauthenticated

Details for allowing no client authentication.

enabled

Unauthenticated is enabled or not.

Type: boolean

Required: False

UserIdentity

Description of the requester that calls the API operation.

principalId

A unique identifier for the requester that calls the API operation.

Type: string

Required: False

type

The identity type of the requester that calls the API operation.

Type: [UserIdentityType](#)

Required: False

UserIdentityType

The identity type of the requester that calls the API operation.

AWSAccount

AWSService

VpcConnectionInfo

Description of the VPC connection.

owner

The owner of the VPC connection.

Type: string

Required: False

vpcConnectionArn

The Amazon Resource Name (ARN) of the VPC connection.

Type: string

Required: False

creationTime

The time when Amazon MSK creates the VPC Connection.

Type: string

Required: False

userIdentity

Description of the requester that calls the API operation.

Type: [UserIdentity](#)

Required: False

VpcConnectionInfoServerless

Description of the VPC connection for CreateVpcConnection and DeleteVpcConnection operations.

owner

The owner of the VPC connection.

Type: string

Required: False

vpcConnectionArn

The Amazon Resource Name (ARN) of the VPC connection.

Type: string

Required: False

creationTime

The time when Amazon MSK creates the VPC Connection.

Type: string

Required: False

userIdentity

Description of the requester that calls the API operation.

Type: [UserIdentity](#)

Required: False

VpcConnectivity

VPC connection control settings for brokers.

clientAuthentication

VPC connection control settings for brokers.

Type: [VpcConnectivityClientAuthentication](#)

Required: False

VpcConnectivityClientAuthentication

Includes all client authentication information for VpcConnectivity.

sasl

Details for VpcConnectivity ClientAuthentication using SASL.

Type: [VpcConnectivitySasl](#)

Required: False

tls

Details for VpcConnectivity ClientAuthentication using TLS.

Type: [VpcConnectivityTls](#)

Required: False

VpcConnectivityIAM

Details for SASL/IAM client authentication for VpcConnectivity.

enabled

Specifies whether SASL/IAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivitySasl

Details for client authentication using SASL for VpcConnectivity.

iam

Details for ClientAuthentication using IAM for VpcConnectivity.

Type: [VpcConnectivityIAM](#)

Required: False

scram

Details for SASL/SCRAM client authentication for VpcConnectivity.

Type: [VpcConnectivityScram](#)

Required: False

VpcConnectivityScram

Details for SASL/SCRAM client authentication for vpcConnectivity.

enabled

Specifies whether SASL/SCRAM authentication is enabled or not.

Type: boolean

Required: False

VpcConnectivityTls

Details for client authentication using TLS for vpcConnectivity.

enabled

Specifies whether TLS authentication is enabled or not.

Type: boolean

Required: False

Document History for API Reference 2.0

The following table describes the documentation for this release of ServiceName.

- **API version: 2019-05-30**
- **Latest documentation update:** May 14, 2024

Change	Description	Date
Amazon MSK DescribeClusterOperationV2 and ListClusterOperationsV2	This is the release of the Amazon MSK API Reference 2.0 to support DescribeClusterOperationV2 and ListClusterOperationsV2.	July 27, 2023
ListClusterOperationsV2 and DescribeClusterOperationV2	Updates for release of the remove broker feature.	May 16, 2024

AWS Glossary

For the latest AWS terminology, see the [AWS glossary](#) in the *AWS Glossary Reference*.
