AWS General Reference

The AWS General Reference provides AWS service endpoint and quota information for Amazon Web Services. Additionally, you can find links to other common topics.

Contents

- [AWS security credentials](#)
- [AWS IP address ranges](#)
- [AWS APIs](#)
- [AWS services endpoints and quotas](#)

AWS security credentials

When you interact with AWS, you specify your *AWS security credentials* to verify who you are and whether you have permission to access the resources that you are requesting. AWS uses the security credentials to authenticate and authorize your requests.

For more information, see the following resources:

- [AWS security credentials](#) in the *IAM User Guide*
- [AWS security audit guidelines](#) in the *IAM User Guide*

AWS IP address ranges

AWS publishes its current IP address ranges in JSON format. You can download a `.json` file to view current ranges.

The IP address ranges that you bring to AWS through bring your own IP addresses (BYOIP) are not included in the `.json` file.

For more information, see the following resources:

- [AWS IP address ranges](#) in the *Amazon VPC User Guide*

AWS APIs

The following pages provide information that is useful when using an AWS API:

- [Retry behavior](#) in the *AWS SDKs and Tools Reference Guide*
- [Signing AWS API requests](#) in the *IAM User Guide*

AWS services endpoints and quotas

You can learn about the endpoints and service quotas in the following pages:

AWS Glossary

For the latest AWS terminology, see the [AWS Glossary](#).

Endpoints in AWS European Sovereign Cloud

If you access services in AWS European Sovereign Cloud by using the command line interface (CLI) or programmatically by using the APIs, you need to know the endpoints. The following table details each AWS service available in AWS European Sovereign Cloud and their corresponding endpoints.

FIPS endpoints are subject to availability, please refer to the services difference documentation.

Amazon Resource Names in AWS European Sovereign Cloud

Amazon Resource Names (ARNs) uniquely identify AWS resources. You use an ARN when you need to unambiguously specify a resource, such as in IAM policies, Amazon S3 bucket names, and API calls. In AWS European Sovereign Cloud, ARNs have a different identifier than in other AWS Regions. For other regions, ARNs begin with:

```
arn:aws:
```

In AWS European Sovereign Cloud, ARNs begin with:

```
arn:aws-eusc:
```

If an ARN that you are using requires you to specify a region, use `eusc-de-east-1`.

For more information about ARNs and namespaces, see [Amazon Resource Names \(ARNs\) and AWS Service Namespaces](#) in the *AWS General Reference*.
